# Extremal Length Closed Extensions Partial Differential

**extremal length and harmonic functions on riemann surfaces** - 1972] extremal length, harmonic functions, riemann surfaces 3 but they are to be taken literally on a compact bordered riemann surface.

**extremal problems in a class of mappings with bounded ...** - we consider mappings with bounded integral characteristics. we construct extremal mappings of plane rings realizing the minimum of these characteristics. the variational belinskii method for the solution of extremal problems [1] is well known in the theory of plane quasiconformal mappings. in [2], this method was used for one class of mappings quasiconformal in the mean. in the present paper ... **two extensions of thurston's spectral theorem for surface ...** - two extensions of thurston's spectral theorem for surface diffeomorphisms anders karlsson abstract thurston obtained a classification of individual surface homeomorphisms via the dynamics of the corresponding mapping class elements on teichmüller space. in this paper, we present certain extended versions of this, first, to random products of homeomorphisms and, second, to holomorphic ... **diameter problems for univalent functions with extension** - in this paper we utilize the method of extremal length to study several diameter problems for functions conformal outside of a disc centered at the origin, with a standard normalization, which possess a quasiconformal extension to a ring subdomain of this disc.

**chebyshev's extremal problems of polynomial growth in real ...** - chebyshev's extremal problems of polynomial growth in real normed spaces sz. g. rievész and y. sarantopoulos izvestiya natsionalnoi akademii nauk armenii. **on the maximal dilation of quasiconformal mappings** - on the maximal dilation of quasiconformal mappings kurt strebel 1. let  $g$  and  $g'$  be two plane open sets and  $w(z)$  a topological map. - ping of  $g$  onto  $g'$ . by  $q$  we denote any quadrilateral in  $g$ , i.e. the topological image of a closed square with a distinguished pair of opposite sides. the conformal modulus  $m$  of  $q$  is the ratio  $m = a/b$  of the sides of a conformally equivalent rectangle  $\mathbb{R}^2$ , the ... **title boundary behaviors of dirichlet functions ...** - infinite extremal length. 1) in this paper all curves are assumed to be locally rectifiable so far as we deal with the extremal length. **4. calculus of variations - personalpagesnchester** - find a closed plane curve of given perimeter which encloses the greatest area. the area may be written as  $a = \int y dx$  between some limits (and taking care about regions above and below the  $x$ -axis) and is subject to a constraint of the form equ. (4.1) where now  $l$  (the perimeter) is fixed in length. common ingredients: (1) an integral with an integrand containing an arbitrary function (2) a ... **extremal length and functional completion** - characterized by the vanishing of the circulation along closed curves homolog zero, the solenoidal fields by the vanishing of the flow through closed surfaces homolog zero, etc.) these restricted classes are, however, incomplete in the  $lv$ -metric, and the question **new extremal binary self-dual codes from a modified four ...** - constructions to the ring  $\mathbb{R}^2$  and considering the  $f_2$  and  $r_1$ -extensions, we obtain new singly-even extremal binary self-dual codes of lengths 66 and 68. more precisely, we find 3 new codes of length 64, 15 new codes of length 66 **conformal welding of jordan curves using weighted ...** - complement of the closed unit disc, extend as homeomorphisms from  $S^1$ , the unit circle, and the welding  $h = g|_{S^1}$  -  $f$  is an element of  $\text{Homeo}^+(S^1)$ . it is an open question to establish the relationship between  $j$  and  $h$ . the case that is well understood is where  $j$  is a quasi-circle which corresponds to  $h$  being quasi-symmetric [2]. one may rephrase this as theorem 1.1 [2]. the homeomorphism  $h: S^1 \rightarrow S^1$  ... **a variation on selberg's approximation problem** - extremal majorant in the case when length  $l \leq 62z$  and has shown that the corresponding extremal majorant is unique. this result has been realized again in the work [25] of littmann, presumably using different methods. in this paper we study the following variation of this problem suggested to us by e. bombieri: let  $z$  be a point in the upper half-plane. construct an analogue of selberg's ...
